NOTES:

1. Maximum EPA (Effective Projected Area) based on "C" Exposure.
2. EPAs are approximate, specific to location and local codes. Consult engineer for specific application.
3. Allowable EPA Weight Load (LBS): To determine maximum pole loading weight, multiply allowable EPA by 30 LBS.
Example: AIPARF 16' pole in 120 mph zone = 199.2 LBS (6.64 x 30)
4. Variations from sizes above are available upon inquiry at the factory.
5. Satisfactory performance of poles is dependent upon the pole being properly attached to a supporting foundation of adequate design.
